

Spenny Piggy

Creator Dispute Evidence Pack - Admin & Developer Specification

Build an admin flow that lets Spenny Piggy generate and send a complete dispute evidence package to the creator when a dispute is opened on their Stripe Express connected account.

Context: Creators are responsible for responding to disputes on their connected Stripe account. Spenny Piggy should support them by packaging transaction metadata, internal logs, content delivery evidence, waiver confirmation, checkout confirmation screenshots, and receipt/access emails into a clean evidence bundle.

1. Goal

Create a single admin action: **Generate Creator Dispute Pack**. The pack should be generated per transaction/payment and sent to the creator with a clear explanation of what to upload or reference in Stripe when responding to the dispute.

The system must not auto-submit dispute responses unless explicitly added later. Phase 1 is support-package generation and creator notification.

2. Required Admin UI

Area	Requirement
Transaction detail page	Add a button: Generate Dispute Pack . Show only if payment has succeeded, content delivery exists, or a dispute/refund risk flag is present.
Dispute support drawer	Show Stripe payment ID, charge ID, application fee ID, creator ID, gifter ID/email, delivery status, waiver status, receipt status, and evidence completeness score.
Creator notification	Button: Send Pack to Creator . Sends email and optionally in-app notification with PDF/ZIP link.
Audit log	Log generated_by_admin, generated_at, sent_to_creator_at, creator_opened_at, package_version, evidence included, and any missing evidence warnings.

3. Evidence Pack Contents

Every generated pack should contain a human-readable PDF summary and an evidence folder/ZIP with raw supporting files where available.

Evidence item	Source	Purpose
Transaction summary	Stripe payment/charge/application fee object + internal DB	Shows payment amount, status, timestamp, creator, gifter, item, descriptor, payment method, risk level.
Stripe metadata export	Stripe metadata on connected account payment	Shows buyer details, content IDs, content URLs, delivery status, waiver confirmation, creator details, item details.

Gifter information logs	Spenny Piggy DB	Shows gifter email, username/guest status, account creation state, IP/device where stored, checkout timestamps, login/access events.
Content delivery proof	Internal content delivery service + storage/CDN logs	Shows content URL, delivered_at, opened/accessed_at if tracked, item type, delivery method, receipt email.
Checkout completion screenshot	Stored static screenshot/template or rendered confirmation snapshot	Shows post-payment screen: gift sent, receipt instruction, create account to access purchased content.
Receipt/access email copy	Transactional email provider logs	Shows the gifter was emailed confirmation, access instructions, receipt, and waiver wording.
Digital waiver evidence	Checkout checkbox log	Shows exact waiver text, checkbox state, timestamp, payment ID, buyer ID/email, IP/device if available.
Terms snapshot	Versioned terms table	Shows terms/privacy/cancellation waiver version accepted at checkout.

4. Evidence Completeness Rules

Field	Required?	Notes
payment_intent_id / charge_id	Yes	Needed to match the dispute to the payment.
creator_id and creator Stripe acct ID	Yes	The creator must know which Stripe Express account/payment this relates to.
buyer_email / gifter identifier	Yes	Use masked versions in creator-facing UI where appropriate, but full value can be included in evidence pack if visible in Stripe and required for dispute evidence.
content_url or content_id	Yes	Do not include expired private URLs only. Include proof of what was delivered and delivery timestamp.
delivery_status = delivered	Yes	If not delivered, flag package as incomplete and block auto-send unless admin overrides.
digital_waiver_confirmed_at	Yes for digital content	Must include exact waiver text accepted by buyer.
receipt_email_delivery_status	Strongly recommended	Include sent_at, delivered_at, opened_at if provider supports it.
checkout_confirmation_screen_evidence	Strongly recommended	Store a fixed screenshot/image or render a PDF page matching the confirmation text shown to users.

5. Admin Workflow

1. Admin opens transaction or dispute-linked payment.
2. Admin clicks "Generate Dispute Pack".
3. System pulls Stripe payment data from the connected account using the creator's Stripe account ID.
4. System pulls internal order, gifter, content delivery, receipt email, waiver, terms, and audit logs.
5. System validates evidence completeness.
6. System generates a PDF summary and supporting ZIP.
7. Admin reviews package preview.
8. Admin clicks "Send Pack to Creator".
9. Creator receives an email/in-app message with instructions and a download link.
10. System logs package generation, delivery, and creator access.

6. Suggested Data Fields

Add or verify these tables/fields. The exact naming can follow existing conventions.

```
transaction_dispute_packs
- id
- payment_intent_id
- charge_id
- connected_account_id
- creator_id
- gifter_id
- buyer_email
- package_status: draft/generated/sent/expired
- evidence_score: integer
- generated_by_admin_id
- generated_at
- sent_to_creator_at
- creator_opened_at
- package_pdf_url
- package_zip_url
- missing_evidence_json
- created_at / updated_at

transaction_evidence_logs
- id
- payment_intent_id
- evidence_type
- source_system
- source_id
- evidence_url
- evidence_json
- captured_at
- immutable_hash
```

7. Stripe Data Pull

Because the payment sits on the creator connected account, the backend must retrieve payment objects using the connected account context.

```
// Example only - adapt to current backend
const paymentIntent = await stripe.paymentIntents.retrieve(
  payment_intent_id,
  { stripeAccount: connected_account_id }
);

const charge = await stripe.charges.retrieve(
  charge_id,
  { stripeAccount: connected_account_id }
);

// Include: amount, currency, status, risk_level, statement_descriptor,
// application_fee_amount, application_fee, metadata, billing_details,
// receipt_url, payment_method_details, created timestamp.
```

8. Creator Email Template

Subject: Dispute evidence pack ready for your Spenny Piggy payment

```
Hi {{creator_name}},

A dispute evidence pack has been generated for transaction {{payment_reference}}.

The pack includes payment details, content delivery proof, buyer checkout records, waiver confirmation,
and receipt/access email logs.

Please download the pack and use it when responding to the dispute in your Stripe Express dashboard
```

before Stripe's deadline.

Download pack: {{secure_download_link}}

Stripe payment: {{stripe_payment_link}}

Important: Spenny Piggy provides supporting evidence, but you are responsible for submitting your dispute response in Stripe unless we tell you otherwise.

Spenny Piggy Support

9. Security & Privacy

Control	Requirement
Secure links	Evidence download links must expire, e.g. 7 days, and require creator authentication.
PII handling	Only include buyer PII needed for dispute evidence. Avoid exposing unnecessary data in admin previews.
Immutable evidence	Store hashes of generated packages and evidence files so the bundle can be proven unchanged.
Access logs	Log each admin/creator view, download, and send event.
No public URLs	Do not include permanent public content URLs unless required. Prefer secured evidence snapshots.

10. Acceptance Criteria

A transaction with delivered digital content can generate a complete PDF evidence pack in under 10 seconds.

The generated pack includes Stripe metadata, internal gifter logs, content delivery proof, waiver confirmation, receipt/access email confirmation, and checkout completion screen evidence.

The creator can receive the package by email and in-app notification and download it from an authenticated link.

Admin can see missing evidence warnings before sending.

Every generation/send/download event is logged in the audit trail.

The system clearly states that creators must respond to disputes in their Stripe Express dashboard unless Spenny Piggy later adds managed dispute submission.

11. Future Phase

Phase 2 can add an admin-generated Stripe dispute response draft, automatic evidence formatting per dispute reason, deadline tracking, creator reminder emails, and optional platform-assisted submission if operationally and legally approved.
