

Spenny Piggy Dispute & Chargeback Prevention Framework

Audience: Developers, Product, Compliance

Payments Model: Stripe Connect – Direct Charges

Merchant of Record: Creator

Purpose

This document defines the mandatory product, UX, and compliance controls required to prevent disputes and chargebacks before payment across all Spenny Piggy features. It is designed to ensure Stripe review readiness, card network compliance, and platform-level risk reduction.

Core Principle

Most disputes are caused by misunderstanding, not fraud. The platform must enforce clarity, structure, and logged evidence before payment occurs.

Global Platform Requirements

- No guarantees, outcomes, or platform liability language.
- All payments framed as access, requests, or digital services.
- Price, terms, delivery, and refund conditions visible before payment.
- All paid actions logged with timestamps and IDs.
- Statement descriptor disclosure shown before checkout.

Paid Tasks / Custom Requests

- Requests only, not guaranteed outcomes.
- Creator sets price and delivery timeframe.
- Creator approval required before delivery.
- Platform enforces delivery deadlines.
- Refunds only triggered when creator misses agreed timeframe.

Instant Content Unlocks

- Content type clearly described.
- Instant digital delivery.
- Access logged with timestamp.

Memberships / Subscriptions

- Billing frequency and renewal terms shown.
- Cancellation path clearly visible.
- Active status and renewal dates visible.

Tributes / Gifts / Tips

- Explicitly voluntary.
- No service or response guaranteed.
- Logged as gifts, not purchases.

Pay-to-Message / Pay-to-DM

- Framed as message requests.
- No promise of reply.
- Delivery defined as message sent.

Blocked / Restricted Language

Automatically blocked or flagged:

guaranteed, guarantee, risk-free, no refunds, refund guaranteed, chargeback-proof, no chargebacks, instant results, guaranteed response, guaranteed delivery, we ensure, we promise, escrow, platform protected funds, money back guaranteed

Contextual review required for dominance or penalty language to ensure consent and virtual-only framing.

Ideal Creator UI Flow

1. Sign up
2. Merchant of Record acknowledgement
3. Connect Stripe account
4. Complete Stripe ID verification
5. Enable monetisation

Ideal Supporter UI Flow

1. View creator profile and offerings
2. Review price and delivery/access terms
3. Confirm statement descriptor and terms
4. Complete checkout

Final Note

This framework is mandatory for all monetised features. Following these controls materially reduces dispute rates, improves dispute win rates, and ensures platform-level compliance while creators remain Merchant of Record.
