

Spenny Piggy - Shop System Developer Specification

This document outlines required enhancements to the Shop system to ensure Stripe compliance, dispute protection, and scalable fulfilment tracking.

1. Product Classification

Add a `product_type` field: `digital_file`, `instant_content`, `subscription_access`, `off_platform_service`, `scheduled_call`, `physical_product`.

2. Delivery Method Tracking

Add `delivery_method` field: `instant_download`, `account_access`, `external_platform`, `manual_delivery`, `scheduled_service`.

3. Delivery Proof Logging

Log `delivery_status`, `delivery_timestamp`, `delivery_type`, `content_url`, and `access_granted` for each order.

4. Buyer Acknowledgement

Add mandatory checkout checkbox confirming off-platform delivery. Store acknowledgement with timestamp.

5. Off-Platform Disclaimer

Display UI notice informing users that some rewards are delivered outside the platform.

6. Scheduled Services

For calls/events store `scheduled_time`, `meeting_link`, and `confirmation_sent`.

7. Success Page Logging

Track success_page_viewed, timestamp, and CTA shown.

8. Email Proof Logging

Log email_sent, email_type, and timestamp for receipts and access emails.

9. Creator Responsibility

Attach creator_fulfillment_responsibility flag to all products.

10. Dispute Pack System

Admin button should compile Stripe metadata, delivery logs, emails, acknowledgements, and creator details into exportable evidence.

11. Order Object Structure

Each order must include: product_type, delivery_method, fulfillment_type, delivery_status, delivery_timestamp, buyer_acknowledgement, email_log, content_access_log, creator_id, metadata_bundle.
