

Overview

Enhance the Membership feature to improve dispute protection, clarity, and data tracking while keeping the system lightweight and scalable.

1. Creator Responsibility Disclaimer

Add a visible disclaimer under rewards: 'Off-platform rewards (e.g. Telegram, Instagram, video calls) are managed by the creator. Spenny Piggy does not control or guarantee delivery of these rewards.'

2. Reward Classification

Tag rewards as: On-platform (content bundles, posts) and Off-platform (Telegram, calls, DMs). Display these labels in UI and store in database.

3. Subscription Reward Logging

When a user subscribes, store: membership tier, selected rewards, and timestamp. This data is used for dispute evidence.

4. Content Delivery Tracking

For on-platform content, track: content availability and last accessed timestamp. This provides proof of delivery in disputes.

5. Future (Do Not Build Yet)

Do not build scheduling systems, integrations, or enforcement systems at this stage. Focus on logging and clarity only.

Goal

Provide strong dispute protection and clarity while maintaining speed and simplicity in development.
