

# Spenny Piggy – Creator-Initiated Daily Payout Upgrade (Developer Spec)

This document defines the end-to-end technical and product specification for allowing new creators to request an upgrade from weekly payouts to daily payouts after meeting trust and risk criteria. This spec applies only to newly onboarded creators.

## 1. Default State for All New Creators

All newly onboarded creators are Stripe Express connected accounts and must default to weekly payouts. Daily payouts are not available at sign-up and cannot be self-enabled.

- Stripe Connect account type: Express
- Payout schedule: Weekly
- Weekly anchor: Friday
- Auto payouts: Enabled

## 2. Eligibility Rules for Daily Payout Upgrade

Creators become eligible to request daily payouts once all of the following criteria are met. Eligibility should be evaluated automatically by backend jobs.

- Account age  $\geq 90$  days from first successful payout
- Minimum of 3 consecutive months of successful weekly payouts
- No negative Stripe balance events
- No unresolved disputes or chargebacks
- Dispute rate below platform-defined threshold
- KYC and bank account fully verified

## 3. Creator Dashboard UX

The creator dashboard must surface payout status and eligibility clearly. The request action is creator-initiated and only visible once eligibility criteria are met.

- Locked state: Informational message explaining requirements
- Eligible state: 'Request daily payouts' button visible
- Pending state: Upgrade request under review
- Enabled state: Daily payouts active

## 4. Upgrade Request Flow

When a creator requests daily payouts, the platform creates an internal upgrade request record. Stripe is not contacted until the request is approved.

- Create PayoutUpgradeRequest record with eligibility snapshot

- Status = pending or auto-approved depending on policy
- Optional admin review for edge cases

## **5. Stripe API Action (On Approval)**

Once approved, the platform updates the connected account payout schedule via the Stripe Accounts API. This action is fully controlled by the platform.

- Set payout interval to daily
- Confirm auto payouts remain enabled
- Log timestamp, actor, and reason for auditability

## **6. Monitoring and Downgrade Logic**

Daily payouts remain conditional. If risk thresholds are breached, the platform may automatically revert the creator to weekly payouts.

- Automatic downgrade on negative balance events
- Automatic downgrade on excessive disputes
- Clear creator messaging on downgrade reason

## **7. Product Positioning**

Daily payouts are positioned as a trust-based feature that rewards consistent, low-risk creators. This protects both creators and the Spenny Piggy platform while aligning with Stripe Connect best practices.

## **Summary**

- All new creators default to weekly payouts
- Daily payouts are creator-requested, not automatic
- Eligibility is automated and risk-based
- Stripe payout schedule changes are platform-controlled
