

Spenny Piggy Analytics & Tracking System (Developer Spec)

Objective:

Implement a full analytics and tracking system focused on revenue, conversion, and retention to enable data-driven growth and optimisation.

Core Principle:

Track every action that impacts revenue, conversion, or retention. Avoid vanity metrics.

1. Funnel Tracking:

Track the full user journey:

- Profile viewed
- Wish/product viewed
- 'Treat Me' clicked
- Checkout started
- Payment completed

Required Metrics:

- Conversion rates between each step
- Drop-off rates

2. Revenue Analytics:

- Total GMV (daily/weekly/monthly)
- Platform revenue (17% + 2%)
- Average transaction value
- Transactions per user
- Revenue per creator

3. Creator Performance:

- Profile views
- Conversion rate
- Total earnings
- Average spend per fan
- Repeat supporters percentage

4. User Behaviour Tracking:

- First payment value
- Repeat payments
- Time between payments

- Total spend per user
- Number of creators supported

User Segmentation:

- Whales (top spenders)
- Repeat users
- One-time users

5. Retention Metrics:

- Day 1, Day 7, Day 30 retention
- Repeat purchase rate
- Creator activity retention

6. Payment & Risk Analytics:

- Failed payment rate
- Refund rate
- Dispute rate
- Risk triggers

7. Real-Time Dashboard:

- GMV (today)
- Payments (last hour)
- Active users
- Top creators
- System failures (payments/webhooks)

8. Event Tracking System:

Each key action must trigger an event:

Example events:

- profile_viewed
- wish_clicked
- checkout_started
- payment_completed
- payment_failed

Each event must include:

- user_id

- creator_id
- timestamp
- value (if applicable)
- session_id

Storage & Implementation:

- Store events in database (e.g., Postgres)
- Consider external tools (Mixpanel/Amplitude) for scaling
- Do NOT rely solely on Stripe data

9. Alerts & Monitoring:

- Conversion rate drops
- Failed payment spikes
- Dispute spikes
- Webhook failures

Priority Implementation Order:

1. Funnel tracking
2. Revenue tracking
3. User behaviour tracking

Summary:

This system enables optimisation of conversion, revenue growth, and user retention. It is critical for scaling the platform effectively.
